PRESS RELEASE

FOR IMMEDIATE RELEASE

Orgatec 2018: Explore the latest technology and workplace solutions with Humanscale

(October 2018) Humanscale present their latest workplace innovations and solutions at Orgatec 2018. Held in Cologne from 23-27 October, Orgatec is the world's leading trade fair for office and facility, tackling the big questions and offering creative solutions for the demands of tomorrow's world of work. Humanscale showcases their newest products which underscore their position as a pioneer of inventive design for the workspace and beyond. The stand (Hall 6, stand number A081) will highlight Humanscale's leadership in ergonomics, healthy materials and high-performance design. With a focus on technology, Humanscale will unveil their new line of monitor arms, along with a "Monitor Arm building area" where visitors will be able to build their own monitor arm and experience the new functionalities and improvements in the range.

Monitor Arms

Humanscale introduce a redesign of its best-selling line of monitor arms, **M2.1**, **M8.1** and **M10** to accommodate changes in how we work with technology today. Designed to optimise the user experience with intuitive functionality, precise positioning and smooth movement – allowing computer users to instantly personalise their work areas and be more comfortable, healthy and productive.

Manufactured with the fewest parts, pieces and packaging possible, Humanscale's new monitor arms minimise the amount of energy and materials needed. Humanscale's patent pending Quick Release Joints snap together instantly for a secure, robust fit and a new built-in Counterbalance Indicator eliminates the necessity of an IT team to assist with the installation process. Like all Humanscale solutions, the new monitor arms are engineered to last for years to come.

Other Humanscale highlights at Orgatec will be:

Seating

The **Smart Ocean** task chair is the embodiment of Humanscale's commitment to sustainable manufacturing, incorporating almost 2 pounds of recycled NetPlus material. It is the first ergonomic chair built with this recycled material.

Summa, Humanscale's first executive boardroom seating exudes luxurious simplicity, presenting a clean aesthetic from every angle. With auto-recline and tension automatically established by the user's weight, Summa offers seamless support and comfort for the boardroom.

Lighting

Nova offers effortless performance and timeless beauty. Soft, glare-free light prevents eye strain, 'Forever Hinges' offer strength and stability, and occupancy sensors turn off with inactivity.

Horizon 2.0 A Red Dot-Award Winner, Horizon 2.0 contains the latest LED technology and PVC alternatives, raising the bar for task lighting. An updated base provides touch interface and the light's elegant aesthetic complements any environment.

Infinity, an LED task light embodies performance in a sleek, timeless design. Equipped with constant torque 'Forever Hinges' for strength and stability in any position, Infinity's large-array, multi-chip LED provides long-lasting, high-quality light which casts just one single shadow.

Sit/Stand Solutions

QuickStand Eco is the next generation in portable sit/stand solutions. Sleeker easier to use and comprised of more sustainable materials than ever before QuickStand Eco features a simple setup, portability and near effortless adjustability.

QuickStand Under Desk offers effortless functionality in a sleek, modern design. The continuous force mechanism is enclosed within a central column beneath the desk surface – allowing users to alternate between sitting and standing postures without interrupting workflow.
