MOVING WALLS DEBUTS THE MOVING TABLE AT CLERKENWELL DESIGN WEEK 2019, LONDON

Moving Walls, the Swiss provider of mobile, magnetic and writeable office tools, debuts the Moving Table, the latest addition to its range of activity-based office furniture for dynamic space design, agile and collaborative working in a comprehensive presentation at Clerkenwell Design Week 2019 from 21 – 23 May in London. Exhibiting at the Bisley offices in Clerkenwell, Moving Walls and Bisley have just announced their exclusive partnership in the UK, Ireland, France, USA and Mexico. The combination of Moving Walls and Bisley storage allows the creation of highly-productive, truly flexible spaces for people to come together to work creatively and effectively in comfort. With the extension of the portfolio to include the new Moving Table doubling as a wall writing panel, it is now possible to create office spaces in a demand-oriented, flexible and agile manner. The entire range is exhibited at Clerkenwell Design Week and is available to order.

The Swiss company Moving Walls presents its comprehensive collection of demand-oriented office tools at Clerkenwell Design Week 2019, including the new Moving Table, extending the Moving Walls System with yet another multifunctional tool for collaborative and agile working methods. Known for the mobile and writeable wall Moving Wall, all Moving Walls office tools are perfectly matched to each other. Used individually or as a combination, users can select items to suit their own hugely diverse working requirements. In addition to the mobile wall, the writeable panel and the acoustic panel, with the new table the Swiss office brand offers a profound answer to the question of future working methods and the establishment of a corporate culture of innovation.

Due to its flexible applications and mobile space design, the multifunctional office system, produced primarily in Switzerland as well as in Europe, promotes not only the productivity and creativity of the employees but also their satisfaction by interaction and agile working in offices as well as in educational institutions, for example. The versatile and writeable office tools structure rooms as well as work processes, enable more efficient use of space and are already widely used in executive offices, conference rooms, in plenary sessions or in creative labs of large companies such as PwC, Roche and Schweizerische Bundesbahn, the ANZ Bank or ARUP.

THE MOVING WALLS SYSTEM

By order of the World Economic Forum, Moving Walls created with the writeable and magnetic wall Moving Wall, a mobile and analogue collaboration tool, whose functional quality enables quicker and more efficient problem solving and the development of ideas in groups. The writing board Moving Panel and the Moving Acoustic Panel serving as a pinboard, also designed by Swiss designer Jörg Boner, can be hung onto the Moving Wall and are ideally suited for individual working requirements. Today, Moving Walls' versatile tools form a holistic and modular office system, whose individual components can not only be freely positioned in the room, depending on need and working methods, but can also be flexibly combined with one another. Upon this working philosophy as well as the pursuit of a productive and dynamic working environment in which the tools adapt to the work process and not the process to the physical work environment, the founding idea of Moving Walls is based.

NEW: THE MOVING TABLE

The Moving Table is a multifunctional and practical office tool. Resting on two solid wood three-leg trestles, the lightweight, writeable tabletop simultaneously doubles up as a spacious presentation panel for the wall. Complementing the modular self-contained office system by Moving Walls, the Moving Table's top can be leaned against the wall safe from slipping or hung into the wall-mounted rail system Moving Rail. The table's clever construction guarantees an easy assembly as well as tool-free storage, making it the perfect agile working tool to accommodate in different sized groups in varying working requirements.

THE MOVING STOOL

The Moving Stool is the perfect addition to the modular and multifunctional office system by Moving Walls. Made from recyclable formfleece, the surprisingly stable and light-weight stool has a generously proportioned and comfortable seat moulded into the top that can also be used as a practical storage space for work materials or for a tablet, for example. The conic shape allows for lateral or longitudinal seating as well as practical stacking of the stool, thus making it another useful mobile working tool in an agile environment. Turned upside down, the stool also doubles as a practical container or paper waste bin. The handhold cut-outs on the sides of the stool allows for easy pick up and portability of the Moving Stool. Designed to fit four stools stacked into the cavity of the Moving Wall, the Moving Stool comes standard in stone grey.

THE MOVING WALL

The Moving Wall has been conceptualised as an agile working tool. In contrast to the classic whiteboard, due to its mobility, the magnetic wall allows innovative collaboration methods, which promote exchange and communication among the team and implement faster jointly developed processes. The high-end quality of the surface as well as the product's intelligent design make Moving Wall an essential tool, which will shape the discussion about "the office of the future". With a simple and functional design, the Moving Wall captivates with its simple elegance and versatile applications. The specially designed extruded aluminium profile visible on the front side in combination with the opposed trapezoid shape, enables one surprising function of the Moving Wall: the positive connection. Due to the sophisticated design, the tool, conceptualised as an individual element, is absolutely modular and can be strung together as often as desired in a straight line or as a circular arc – without interrupting the flow of writing with an edge. Simple unpack and stand up with no onsite assembly facilitates a speedy transport and install, making the Moving Wall also a great mobile room divider as well as a helpful storage facility. Introduced for the first time at Designers' Saturday 2016, the Swiss quality product has since been specified in companies, organisations, agencies and global conferences such as the World Economic Forum, the Swiss railway and Swiss post.

THE MOVING PANEL

The magnetic, writeable Moving Panel is a versatile tool and an ideal extension of the mobile whiteboard Moving Wall. Designed by Swiss designer Jörg Boner, the high-quality panel is available in two functional sizes and comes with the same high-end surface as the Moving Wall. The mobile, writeable presentation surface can be effortlessly attached to the Moving Wall or used as a stand-alone writeable surface on the wall by means of a rail-system of magnetic metal profiles, responding perfectly to the requirements of highly flexible working environments and methods. The mobile panel is an ideal tool for conference rooms, offices as well as for residential settings. The paper thin, frameless panel is magnetic and can be flexibly attached to the Moving Wall without even causing a sound. With a thickness of only one millimeter it is possible to continue writing from the panel onto the Moving Wall without a noticeable difference. Its lightweight and mobile nature means that the Moving Panel can comfortably be detached from the Moving Wall and placed as a piece of paper on a table in order to continue writing there. The small version with a length of 75 cm is an ideal and easy to handle messenger. The large size with 100 cm and a weight of 4 kilogram and the rounded edges of the panel mean that it can just as easily be carried.

THE MOVING ACOUSTIC PANEL

The Moving Acoustic Panel is part of the multifunctional office system by Moving Walls and extends the versatile office collection with a functional acoustic panel. Also designed by Jörg Boner, the acoustic panel resulted out of the necessity to improve the room acoustics especially in open-plan offices. Easy to attach and detach from the especially designed wall-mounted rail-system as well as onto the Moving Wall, the Moving Acoustic Panel serves as a room divider as well as to support a pleasant room atmosphere. In addition to an acoustic effectiveness, the Moving Acoustic Panel is pinnable and thus offers additional applications. As a design element, it can also be attached to the rail-system or the Moving Wall and can serve simultaneously as a pinboard. In combination with the Moving Panels, a multifunctional system emerges, whose individual modules and elements can be freely combined according to the working processes and activities, offering almost unlimited possibilities of application. The recycled PET material originates from Echopanel and guarantees a high inherent stability. With a thickness of only 12 mm and a weight of 3 kilogram the Moving Acoustic Panel is easily transportable and contributes to the composition of flexible working environments. The Moving Acoustic Panel is available in the standard colours anthracite and stone grey. Custom colours are available on request.

THE MOVING CUP

The magnetic pen holder Moving Cup is a practical accessory at work. The simple Moving Cup can be easily held to the Moving Wall as well as to the Moving Panel and holds markers as well as cloths and other necessary work utensils. With its convenient size, the pen holder is no hinderance on the wall and takes up little space on the desk.

THE MOVING RAILS

The rail system of magnetic, aluminium profiles, Moving Rails, allows for the attachment of the mobile Moving Panel and Moving Acoustic Panel to the wall. With the help of the Moving Rails, the writeable presentation surfaces in both sizes as well as the acoustic panel can be used and combined on a large-scale and temporarily on the wall. The Moving Rails are available in three sizes respectively.

Ends./

ABOUT MOVING WALLS

Moving Walls is a provider of mobile, magnetic writeable office tools for dynamic space design and agile working. The holistic multifunctional system of flexible office furniture allows for spaces to be easily reconfigurable and for setting up entire offices if needed on an ad hoc basis. The versatile and writeable office tools structure rooms as well as work processes, enable more efficient use of space and are already widely used in executive offices, conference rooms, in plenary sessions or in creative labs of large companies such as PwC, ARUP, Roche and Schweizerische Bundesbahn, the ANZ Bank or the Fraunhofer-Institute. Originally designed for the World Economic Forum, today the brand's collection of activity-based office furniture offers a profound answer to the question of future working methods and the establishment of a corporate culture of innovation. All office tools are perfectly matched to each other. Used individually or as a combination, users can select items to suit their own hugely diverse working requirements. In addition to the mobile wall, the writeable panel and the acoustic panel, with the new table and stool, it is now possible to create entire office spaces in a demand-oriented, flexible and agile manner.

Designed by Jörg Boner, the versatile products fuel new processes of idea finding and an interactive work atmosphere. Founded in 2007, the company now distributes its products worldwide. Bisley has the exclusive distribution rights for Moving Walls in the UK and Ireland, USA, Mexico and France.
